SUMMARY

Customer-facing engineer with 26 years in software — full-stack development, engineering team leadership, and founder-led technical sales. A decade in the technology-learning space helping engineers master complex platforms. I own the technical side of the deal: discovery that surfaces the real problem, demos that prove rather than perform, and hands-on technical evaluations that close on evidence. I write publicly about how technical buyers evaluate complex systems at technicaltrust.org.

CORE SKILLS

- **Sales engineering motion:** discovery, value-mapped product demonstrations, technical evaluations / POVs, objection handling, technical close, post-sale adoption and enablement
- **Hands-on:** Node.js, JavaScript/TypeScript, React, Next.js, Python, REST & GraphQL APIs, PostgreSQL/Supabase, Stripe, Shopify APIs, MCP / AI integrations, CI/CD, cloud architecture
- **Communication:** technical writing and documentation, executive and buyer-level presentations, developer education, workshop facilitation

EXPERIENCE

Founder & Principal Engineer — Shopification Studio

Shopify development studio

2025 – Present • Kaysville, UT

- Run the full technical sales cycle for the studio: discovery calls with merchants, solution scoping, live demos, proposal and technical close — every engagement is a technical evaluation won on credibility with a non-technical buyer.
- Design and build production commerce systems end-to-end (Online Store 2.0, Node.js, React, Shopify APIs, Stripe), including custom Shopify apps built from product design through merchant-facing UX.
- Own post-sale adoption: onboarding, documentation, and enablement for business owners operating systems they can't inspect themselves.

Senior Frontend Engineer — Omni Federal

2023 – 2025 • Remote

- Built and shipped frontend systems for federal government clients — an environment where security posture, compliance, and stakeholder trust are non-negotiable requirements, not features.
- Translated mission requirements from non-technical government stakeholders into working software; presented technical decisions and tradeoffs to program leadership.
- Built customer-facing components for the Digital University edTech platform.

Technical Skills Consultant — Pluralsight, Professional Services

2020 – 2023 • Remote

- Ran end-to-end consulting engagements with enterprise clients: deep-dive discovery with L&D leaders and engineering team leads to map upskilling needs, then designed curated technical learning plans aligned to their goals and the platform library.
- Carried a rolling portfolio of ~10 enterprise engagements per two-week cycle — hundreds of client consultations across the tenure, spanning organizations of varied size and technical maturity.
- Engagements repeatedly drove increased platform adoption and supported customer retention — turning signed contracts into successful, renewing customers.
- Partnered with Sales Operations to design strategic offerings for enterprise accounts, strengthening the value case at renewal and expansion decision points.

Engineering Technical Lead — Pluralsight

2014 – 2020 • Remote

- Led a distributed engineering team (contract engineers in Ukraine) inside a platform that teaches technology to millions of engineers — coordinating delivery between vendor engineering and Pluralsight product leadership.
- Served as the technical translation layer between two organizations: requirements in, architecture decisions and status out, trust maintained across the contract boundary.

Earlier Career

2000 – 2014 • Remote and Onsite

- **Ragnar Events, LLC** — Web Technology Manager. Ran online operations for a popular relay foot race company.
- **Utah Creative** — Freelance web development and graphic design consulting services.
- **Office of U.S. Senator Bob Bennett** — Webmaster. Managed the Senator's official web presence.

SELECTED PROJECTS & WRITING

- **Technical Trust** (technicaltrust.org) — a public resource teaching technical buyers and leaders how to evaluate complex systems: the four-pillar trust framework, field guides on vendor evaluation and demos, and a growing pattern catalog.
- **DietAgent** — AI health-tracking integration built on Model Context Protocol (MCP); hands-on work with the current AI tooling stack. Native mobile app running on iOS.
- **UtahDirect** — local business directory (Next.js, Supabase, Tailwind) built in collaboration with Davis School District's Catalyst Center student program — stakeholder management plus full-stack delivery.

EDUCATION & DEVELOPMENT

- **AWS Certified Cloud Practitioner** — 2022
- **University of Utah** — Mass Communications, 2008
